PSA: Markov Sick-Sicker model in R

with age-specific mortality

The DARTH workgroup

Developed by the Decision Analysis in R for Technologies in Health (DARTH) workgroup:

Fernando Alarid-Escudero, PhD (1)

Eva A. Enns, MS, PhD (2)

M.G. Myriam Hunink, MD, PhD (3,4)

Hawre J. Jalal, MD, PhD (5)

Eline M. Krijkamp, MSc (3)

Petros Pechlivanoglou, PhD (6)

Alan Yang, MSc (7)

In collaboration of:

- 1. Drug Policy Program, Center for Research and Teaching in Economics (CIDE) CONACyT, Aguas-calientes, Mexico
- 2. University of Minnesota School of Public Health, Minneapolis, MN, USA
- 3. Erasmus MC, Rotterdam, The Netherlands
- 4. Harvard T.H. Chan School of Public Health, Boston, USA

Change eval to TRUE if you want to knit this document.

```
rm(list = ls())  # clear memory (removes all the variables from the workspace)
```

01 Load packages

```
if (!require('pacman')) install.packages('pacman'); library(pacman) # use this package to
# load (install if required) packages from CRAN
p_load("here", "dplyr", "devtools", "scales", "ellipse", "ggplot2", "lazyeval", "igraph", "truncnorm",
# load (install if required) packages from GitHub
# install_github("DARTH-git/dampack", force = TRUE) Uncomment if there is a newer version
# install_github("DARTH-git/dampack", force = TRUE) Uncomment if there is a newer version
# install_github("DARTH-git/darthtools", force = TRUE) Uncomment if there is a newer version
p_load_gh("DARTH-git/dampack", "DARTH-git/darthtools")
```

02 Load functions

```
# No functions needed
```

03 Input model parameters

```
# Strategy names
v_names_str <- c("No Treatment", "Treatment")</pre>
# Number of strategies
n_str <- length(v_names_str)</pre>
# Markov model parameters
age <- 25
                                     # age at baseline
max_age <- 55
                                    # maximum age of follow up
     <- max_age - age
                                    # time horizon, number of cycles
n_t
       <- c("H", "S1", "S2", "D") # the 4 states of the model: Healthy (H), Sick (S1),
v_n
                                    # Sicker (S2), Dead (D)
       <- length(v_n)
                                     # number of health states

                                   # utility when dead
u_trt <- 0.95
                                   # utility when being treated
# Discounting factor
d_r <- 0.03
                                    # equal discount of costs and QALYs by 3%
\# calculate discount weights for costs for each cycle based on discount rate d_{\_}c
v_dwc <-1 / (1 + d_r) ^ (0:n_t)
\# calculate discount weights for effectiveness for each cycle based on discount rate d_e
v_dwe <-1 / (1 + d_r) ^ (0:n_t)
```

04 Define and initialize matrices and vectors

04.1 Cohort trace

```
# create the markov trace matrix M capturing the proportion of the cohort in each state
# at each cycle
m_M_notrt <- m_M_trt <- matrix(NA,</pre>
```

04.2 Transition probability array

Fill in the transition probability array:

```
# from Healthy
# from Sick
# from Sicker
# from Dead
# create transition probability matrix for treatment same as NO treatment
a_P_trt <- a_P_notrt</pre>
```

05 Run Markov model

```
# your turn
```

06 Compute and Plot Epidemiological Outcomes

06.1 Cohort trace

```
# your turn
```

06.2 Overall Survival (OS)

```
# your turn
```

06.2.1 Life Expectancy (LE)

your turn

06.3 Disease prevalence

your turn

06.4 ratio of sick(S1) vs sicker(S2)

your turn

07 Compute Cost-Effectiveness Outcomes

07.1 Mean Costs and QALYs for Treatment and NO Treatment

your turn

07.2 Discounted Mean Costs and QALYs

your turn

07.3 Compute ICERs of the Markov model

your turn

07.4 Plot frontier of the Markov model

your turn

08 Deterministic Sensitivity Analysis

08.1 List of input parameters

Create list "l_params_all" with all input probabilities, cost and utilities.

08.2 Load Sick-Sicker Markov model function

```
source("Functions_markov_sick-sicker_tunnels.R")
```

08.3 One-way sensitivity analysis (OWSA)

```
# your turn
```

08.3.1 Plot OWSA

```
# your turn
```

08.3.2 Optimal strategy with OWSA

```
# your turn
```

08.3.3 Tornado plot

```
# your turn
```

08.4 Two-way sensitivity analysis (TWSA)

your turn

08.4.1 Plot TWSA

your turn

09 Probabilistic Sensitivity Analysis (PSA)

Function to generate PSA input dataset

09.1 Conduct probabilistic sensitivity analysis

your turn

09.2 Create PSA object for dampack

your turn

09.2.1 Save PSA objects

your turn

09.3 Create probabilistic analysis graphs

your turn

Vector with willingness-to-pay (WTP) thresholds.

your turn

09.3.1 Cost-Effectiveness Scatter plot

your turn

09.4 Conduct CEA with probabilistic output

your turn

09.4.1 Plot cost-effectiveness frontier

your turn

09.4.2 Cost-effectiveness acceptability curves (CEACs) and frontier (CEAF)

your turn

09.4.3 Expected Loss Curves (ELCs)

your turn

09.4.4 Expected value of perfect information (EVPI)

your turn
